---

Here is the placemark in Google Earth for Exide. If you enable the pictures and 3d buildings when you zoom in you can click on 360 degree pictures of the area. The area to the south that you thought was residential to the south is a series of small green tanks. The nearest house is 1.4 miles southeast of the facility on a road with about 5 houses.

Google Earth streams the world over wired and wireless networks enabling users to virtually go anywhere on the planet and see places in photographic detail. This is not like any map you have ever seen. This is a 3D model of the real world, based on real satellite images combined with maps, guides to restaurants, hotels, entertainment, businesses and more. You can zoom from space to street level instantly and then pan or jump from place to place, city to city, even country to country.

Get Google Earth. Put the world in perspective.
